AIRFORCE RASS SHELTER 18,4 x 15,5 x 4,1 (5,7)

Airforce Shelter System (AirRASS)

The AirRASS is an advanced modular shelter that offers protection throughout the year, this is because the materials used have been developed to withstand harsh subarctic climates. The AirRASS shelters are extremely suitable for airplanes and helicopters use and also as a specially equipped more protection Ballistic and Multispectral Camouflage. The frame is made strong steel and designed heavy use carrying material layers inside of tent.

- Camouflage nets and systems
- Camouflage accessories
- Biogas material
- Converted tarpaulins
- Marketing banderoll material
- Tailor-made pvc covers
- Bags
- Engineering

Rapid Armour Shelter System

The Rapid Armour Shelter System (international patent) is a new, innovative ballistic protection system. This military-certified lightweight fortification wall system is ideal for fast-moving troops. The fortification walls can be built and dismantled in a few minutes, affording protection for troops during even short stops or operations. The panels, which have a protection level of $v_{50} > 600$ m/s (1.1 g FSP, STANAG 2920), protect men or property from fragments and bullets. The weight of a square module is 18 kg, while a triangular module weighs 8 kg.
